

The **Simply Clean**[®] Difference

- Exudate-free wash water
- More potent sanitizer strength with less chemical usage
- Eliminates recirculating water as a media for cross contamination
- Effective on a broader range of bacteria, including gram-positive organisms such as Listeria
- Reduced organic load on finished product
- Smaller line footprint
- Reduced enclosed harborage sites
- Reduced downtime
- Less off-gassing

Ultra-pure, single-pass sanitizing spray wash system

IEH validated

More potent sanitation with
lower chemical usage

Less exudate on
finished product

Revolutionary Single-Pass Wash System

The Future of Fresh-Cut

Comprehensive

Line Design
Water Purification
Sanitizing Agent

Revolutionary Line Design

Simply Clean® uses an **ultra-pure, single-pass sanitizing** spray for superior finished product results.

Our comprehensive system:

- **Eliminates** recirculated water as a media for cross-contamination
- **reduces** the amount of sanitizing chemicals needed
- **increases** sanitizer strength delivered to finished product
- **broadens** the range of pathogens sanitized

Water Purification

- **Sustainable** - minimum of 50% reduction in water consumption
- 7-step water purification process
- Double pass reverse osmosis includes UV and chlorine treatment at final stage for zero microbial risk
- 100% control of input wash water

Wash Water Flume vs. Simply Clean®

Left to right: Flume A, Flume B - label obscured
Simply Clean® - label visible

Which would you rather wash your vegetables in?

Sanitizing Agent

- Compatible with various sanitizers, including chlorine dioxide (ClO₂)
- 10x-20x the free chlorine sanitizing power with 1/20th the total chemical usage on high organic items
- Easier to maintain target chemical ranges
- Commodity specific PLC settings offer unparalleled efficiency and control
- Automatic shutoff if the line is out of optimal range

Results

Less organic material on finished product

Finished product in distilled water
